

Stripe Go-Live Guide

FactoryLM / MIRA — Accept Real Payments

Prepared June 10, 2026

Goal: By the end of this guide, a stranger can visit factorylm.com/buy, click "Book Your Assessment," pay \$500 with a real credit card, and you receive the money in your Stripe account. Total time: ~30 minutes.

What's Already Built (No Code Changes Needed)

The entire Stripe integration is coded and deployed. The checkout flow, webhook handler, tenant provisioning, billing portal, and customer management all work. The only problem: everything is wired to test keys. This guide walks you through swapping test keys for live keys.

Component	What It Does
Checkout flow	factorylm.com/buy → Stripe Checkout → payment → tenant provisioned
Webhook handler	/api/stripe/webhook receives <code>checkout.session.completed</code> events
Customer management	Stripe customer created with <code>tenant_id</code> metadata
Billing portal	Customers can manage subscriptions via Stripe portal
Price display	\$500 Assessment on /buy and /pricing pages

Important: Your Wells Fargo card (-9094) is currently bouncing payments. Before going live with Stripe, make sure you have a funded payment method. DigitalOcean will suspend your VPS on Sunday June 14 if the \$74.05 isn't paid.

Step 1

Create Your Live Stripe Product + Price

1a. Log into Stripe

- Go to **dashboard.stripe.com**
- Log in with your Stripe account credentials

1b. Switch to Live Mode

- Look at the **top-right corner** of the Stripe dashboard
- You'll see a toggle that says "**Test mode**" with an orange label
- Click the toggle to switch to **Live mode**
- The dashboard background changes from orange-striped to clean white

***If you haven't activated your Stripe account yet:** Stripe will ask you to verify your identity, add a bank account for payouts, and confirm your business details. This can take 1-2 business days for verification. Start this now if you haven't already.*

1c. Create the Product

- In Live mode, go to **Product catalog** (left sidebar)
- Click "+ Add product"
- Name: **Maintenance AI Readiness Assessment**
- Description: **One-time assessment of your facility's maintenance data readiness for AI. Includes asset inventory, documentation audit, CMMS review, and 90-day roadmap.**

1d. Create the Price

- On the same product page, under **Pricing**, click "**Add a price**"
- Price: **\$500.00**
- Billing period: **One time** (not recurring)
- Currency: **USD**
- Click **Save product**

1e. Copy the Price ID

- After saving, click on the price you just created
- You'll see a **Price ID** that looks like: **price_1Abc2DefGhIjKlMn**
- Copy this ID — you'll need it in Step 3

***Checkpoint:** You should now have a live Product with a \$500 one-time Price. The Price ID starts with **price_** (NOT **price_test_**).*

Step 2

Get Your Live API Keys

- In the Stripe dashboard (still in **Live mode**), go to **Developers** (left sidebar)
- Click **API keys**
- You'll see two keys:

Key	Looks Like	Notes
Publishable key	pk_live_...	Public — used in frontend (not needed for your setup)
Secret key	sk_live_...	Private — NEVER share this. Click "Reveal" to see it.

- Click **"Reveal live key"** next to the Secret key
- Copy the **sk_live_...** key — you'll need it in Step 3

Security: Never paste your live secret key into chat, email, Slack, or any file that gets committed to git. It goes directly into Doppler (Step 3) and nowhere else.

Step 3

Set Up the Live Webhook

Webhooks tell your app when a payment succeeds. Without this, Stripe takes the money but your app never knows — so the tenant never gets provisioned.

3a. Create the webhook endpoint

- In Stripe dashboard → **Developers** → **Webhooks**
- Click **"+ Add endpoint"**
- Endpoint URL: **<https://factorylm.com/api/stripe/webhook>**

3b. Select events to listen for

- Click **"+ Select events"** and check these three:

Event	What It Triggers
checkout.session.completed	Customer finished paying — provision their tenant
customer.subscription.updated	Plan changed — update tier/quota
customer.subscription.deleted	Subscription cancelled — handle offboarding

- Click **"Add endpoint"** to save

3c. Copy the signing secret

- After creating the endpoint, click on it to open the detail page
- Under **"Signing secret"**, click **"Reveal"**
- Copy the **whsec_...** value — you'll need it in Step 4

Checkpoint: You now have three values ready to paste into Doppler:

1. **sk_live_...** (API secret key)
2. **price_...** (Price ID for the \$500 assessment)
3. **whsec_...** (Webhook signing secret)

Step 4

Update Doppler Secrets

Doppler is where all your secrets live. The app reads these at runtime — no code changes needed.

4a. Open Doppler

- Go to **dashboard.doppler.com**
- Open project: **factorylm**
- Open config: **prd** (production)

4b. Set the three secrets

Secret Name	Value	Where You Got It
STRIPE_SECRET_KEY	sk_live_...	Your live API secret key from Step 2
STRIPE_PRICE_ID	price_...	The \$500 assessment Price ID from Step 1e
STRIPE_WEBHOOK_SECRET	whsec_...	The webhook signing secret from Step 3c

- Click on each secret name → paste the new value → Save
- If the secrets don't exist yet, click **"Add Secret"** to create them

4c. Also update dev config (optional but recommended)

- Switch to config: **dev**
- Set the same three secrets but with your **test mode** keys
- This keeps dev testing safe from touching real money

***Do NOT** paste production (live) Stripe keys into the **dev** config. Dev uses test keys. Prd uses live keys. Mixing them violates the environment doctrine.*

Step 5

Deploy + Verify

The VPS containers read secrets from Doppler at startup. A deploy restarts the container and picks up the new keys.

5a. Deploy mira-web

From CHARLIE (or any machine with **gh** CLI authenticated):

```
gh workflow run deploy-vps.yml -f services="mira-web"
```

- Wait for the deploy to complete (~2-3 minutes)
- Check that the container came back up: the deploy workflow reports status

5b. Test the checkout flow

- Open **factorylm.com/buy** in your browser
- Click "**Book Your Assessment — \$500**"
- You should be redirected to a **Stripe Checkout page**
- The price should show **\$500.00** (not \$97 or any test amount)
- The page should NOT have orange "TEST MODE" stripes

***Don't complete a real payment to test!** Just verify the checkout page loads with the correct price and no test-mode indicators. If you want to test the full flow, use Stripe's test card number (4242 4242 4242 4242) while still in test mode, THEN switch to live.*

5c. Verify the webhook

- In Stripe dashboard → **Developers** → **Webhooks** → click your endpoint
- You should see recent events (or "No events yet" if nobody has paid)
- Click "**Send test webhook**" → select **checkout.session.completed**
- It should show **200 OK** response. If it shows an error, check the VPS container logs

***You're live!** When a customer clicks "Book Your Assessment" on factorylm.com/buy, pays \$500 on Stripe Checkout, and the webhook fires — their tenant is automatically provisioned and they can start using MIRA. The money lands in your Stripe account (minus Stripe's 2.9% + \$0.30 fee = you net ~\$485).*

Troubleshooting

Symptom	Fix
Checkout page shows \$97 instead of \$500	Wrong STRIPE_PRICE_ID in Doppler prd. Update it to the \$500 price ID and redeploy.
Checkout page has orange "TEST MODE" stripes	STRIPE_SECRET_KEY in Doppler prd is still a test key (sk_test_...). Replace with sk_live_... and redeploy.
"STRIPE_SECRET_KEY not set" error	The secret doesn't exist in Doppler prd, or the container didn't restart after you set it. Redeploy.
Webhook returns 401 or 400	STRIPE_WEBHOOK_SECRET mismatch. Copy the signing secret from the webhook endpoint page again and update Doppler.
Payment succeeds but tenant not provisioned	Webhook URL is wrong or unreachable. Verify it's https://factorylm.com/api/stripe/webhook (not http, not a different path).
"Your account cannot currently make live charges"	Stripe account verification isn't complete. Check Stripe dashboard for required verification steps.
Card declined on your end	Wells Fargo card (-9094) has insufficient funds. Fund it or add a different card to Stripe.

Quick Reference

Item	Value
Stripe Dashboard	dashboard.stripe.com
Doppler Dashboard	dashboard.doppler.com → factorylm → prd
Checkout URL (customers see)	factorylm.com/buy
Pricing page	factorylm.com/pricing
Webhook endpoint	factorylm.com/api/stripe/webhook
Deploy command	<code>gh workflow run deploy-vps.yml -f services="mira-web"</code>
Container logs	SSH to VPS → <code>docker logs mira-web</code>
Stripe fee	2.9% + \$0.30 per transaction

Item	Value
Your net on \$500	~\$485.20

Prepared by the FactoryLM AI operations team. Once live, your first \$500 assessment sale is one click away.
