

Build with Gemini XPRIZE

Registration Brief for FactoryLM / MIRA

Prepared June 08, 2026 — Confidential

Competition at a Glance

Item	Detail
Prize Pool	\$2,000,000 (25 winners, no equity dilution)
Grand Prize	\$500,000 cash
Build Window	May 19 – Aug 17, 2026 (90 days)
Days Remaining	~70 days from June 8
Finals	September 25, 2026 — Los Angeles (top 5 live pitch)
Judging	Business Viability (33%) + AI-Native Ops (33%) + Category Impact (33%)
Eligibility	Individuals or orgs under 25 employees. US-based OK.
Gemini Req.	At least one Gemini API LLM call in production (other providers allowed alongside)
Registration	geminixprize.com / xprize.devpost.com
Free Credits	\$100 Google AI Ultra + \$300 Google Cloud

Recommended Category: Small Business Services

"Powering everyday businesses with tools to compete and win." MIRA is a maintenance intelligence tool for small and medium manufacturers who can't afford dedicated reliability engineers or PLC specialists. It maps their maintenance reality (manuals, work orders, fault history, PLC tags, component relationships) into an AI-ready Unified Namespace, then turns that into real-time troubleshooting, planning, and reliability intelligence. This is textbook Small Business Services.

*Alternative category: **Entrepreneurship & Job Creation** — "fueling the tools that help new founders and economies thrive." MIRA enables a new class of maintenance consulting business (the DT assessment model) and creates skilled work for technicians who can now leverage AI. Weaker fit than Small Business Services but viable as a fallback.*

Why MIRA / FactoryLM Qualifies

Eligibility

- Solo founder (Mike Harper) — well under 25-employee cap
- US-based, age of majority — no geographic exclusions
- FactoryLM is a legal entity that can register as an Organization
- No conflicts with XPRIZE, Google, Hacker Fund, or any Promotion Entity

Gemini Compliance

MIRA's inference cascade already routes through Gemini (Groq → Cerebras → Gemini). The competition requires at least one Gemini API LLM call in the deployed application — MIRA satisfies this natively. Additional LLM providers are explicitly allowed alongside Gemini. The Gemini call is a legitimate production function (diagnostic reasoning fallback), not a gratuitous addition.

AI-Native Operations (1/3 of score)

The judges assess "the extent to which AI is live in production and executes key decisions." FactoryLM already runs its own operations through AI agents:

- **Orchestrator Pulse** — every 4 hours, rotates beta-readiness audits across 6 lenses, generates patches, builds product knowledge graph
- **Lead Discovery** — daily automated city-rotation search, ICP scoring, HubSpot CRM creation
- **Lead Enrichment** — biweekly contact enrichment against discovered companies
- **Inbox Triage** — daily Gmail scan, priority classification, structured digest
- **PR Merge Sweep** — daily triage of open PRs with safety-critical holds
- **Eval Regression** — weekly automated test regression against 57-case golden set
- **Competitive Intel** — weekly competitor monitoring (Edmund AI, MaintainX, etc.)
- **Adversarial Review** — weekly security triage of code-review findings
- **Uncommitted Work Nag** — nightly check for dirty working tree

This is not AI as a feature — it's AI as the operating system of the business. The agent execution logs, API usage records, and dashboard screenshots the competition requires as "product evidence" already exist.

Business Viability Gap (1/3 of score)

This is the critical gap. The competition requires real revenue from arms-length third-party customers during the 90-day window. FactoryLM has \$0 revenue today. The 70-Day Sprint Plan (companion document) maps the path to closing this gap via DT Assessments (\$500–1,500) and MIRA Pilot subscriptions (\$499–649/mo).

Submission Checklist

Deliverable	Requirement	Status
GitHub Repo	Share Mikecranesync/MIRA with testing@devpost.com and judging@hacker.fund	Ready — repo exists
3-Min Video	Show MIRA answering a real maintenance question with cited evidence, Hub, UNS, train-before-deploy	Not started — Sprint Week 6–7
Written Narrative	500–1,000 words: human vs AI labor, jobs created, building story	Not started — Sprint Week 8
Revenue Evidence	Stripe dashboard export, bank statement, or P&L;	Blocked — need first sale
Expenses	Total costs + marketing spend during hackathon period	Can document — Doppler/DigitalOcean/Neon bills
Product Evidence	Agent execution logs, API usage, dashboards	Ready — orchestrator pulse, eval framework
Customer Evidence	Contact info of real customers + testimonials	Blocked — need first customer
Corporate ID	FactoryLM business registration	Verify current

Registration Steps

Step 1. Go to geminixprize.com or xprize.devpost.com

Step 2. Click "Join Hackathon" — create or log in with a Devpost account

Step 3. Register as an Organization (FactoryLM) with Mike Harper as Representative

Step 4. Claim free credits: \$100 Google AI Ultra + \$300 Google Cloud

Step 5. Share the MIRA GitHub repo with testing@devpost.com and judging@hacker.fund

Step 6. Begin the 70-Day Sprint (see companion document)

Prize Structure

Placement	Prize	Notes
1st Place	\$500,000	Grand prize — live pitch in LA
2nd Place	\$200,000	
3rd–5th Place	\$100,000 each	3 winners
Runner-up	\$50,000 each	15 winners
Category Prize	\$50,000 each	5 categories (1 per category)

Each project is eligible for a maximum of one prize. The realistic target for MIRA is a **runner-up prize (\$50,000)** or the **Small Business Services category prize (\$50,000)**. Top 5 (live pitch in LA) is achievable if revenue materializes and the demo is compelling.
