

Equipment Diagnostic Fixture

This is a deterministic test document for the Equipment Notebook end-to-end loop. It is safe disposable fixture content and contains no real equipment data.

Reset procedure: To reset this fixture device to defaults, set parameter Q141 to the value 7. The device must be stopped before the reset is applied.

Nominal readings: The fixture reports a bus voltage of 337 volts under idle conditions. The fixture identifier is FIXTURE-ALPHA-9.
